SUMMARY

An AI & Data Science Undergraduate at REVA University focused on cybersecurity and AI-driven systems. Experienced in ML projects and problem-solving, with an interest in threat detection and secure system design.

SKILLS

Programming: Python, C, SQL, HTML, CSS

Tools: Git, GitHub, Jupyter Notebook, Streamlit

Frameworks & Libraries: Flask, PySpark, MLlib

Data & Visualization: Big Data Processing, Data Analysis, Interactive Dashboards

PROJECTS

Crime Data Analysis and Prediction System

- Implemented a comprehensive crime data analysis and forecasting system based on PySpark and machine learning techniques.
- Conducted analysis and mining of large amounts of data to determine crime trends and high-crime areas using predictive analysis through an interactive dashboard.

TrustScore AI Lens

- Created an AI-based cybersecurity system that is capable of identifying phishing sites, fake reviews, AI spam, and suspicious behavior through natural language processing and behavioral profiling, and intelligent trust scoring mechanisms.
- Designed a real-time risk assessment system that evaluates online risks, recognizes social engineering tactics, and offers security intelligence for secure online engagements.

Clarity AI

- Created a digital wellness app using cloud-based LLMs for assessing online information in terms of reliability, misinformation, emotional reasoning, and flawed logic.
- Applied cognitive load assessment and reflective practice techniques to foster critical thinking skills and media literacy for effective decision-making.

Cybersecurity Toolkit

- Implemented a web-based cybersecurity kit utilizing the Flask framework in order to illustrate key principles of cybersecurity.
- Tools built include a password strength tester, cryptographic functions, and various security simulators.

AI Security Gateway – Prompt Injection Defense System

- Developed an AI-driven security gateway that will secure LLMs from prompt injection threats, jailbreak attacks, and malicious prompts in addition to detecting data leaks.
- Established an intelligent prompt sanitization and security system which categorizes the intentions of the attacker and ensures that no harm is posed to the LLMs by neutralizing the dangerous prompts.

EDUCATION

REVA UNIVERSITY

Sept 2023 - Present

Bachelors In Technology, Artificial Intelligence & Data Science

- **Coursework:** Object-Oriented Programming (OOP), Machine Learning, Image Processing, Web Development, Cryptography (Encryption/Decryption), Password Security, Network Security Basics.
